

Zscaler Academy

Zscaler for Users — Essentials (EDU-200) Certificate

An introductory course providing an overview of the Zscaler Zero Trust Exchange

Course Description

This course is designed to provide network engineers and security administrators with a comprehensive overview of how to deploy and provision the Zscaler Zero Trust Exchange™. In it, you'll learn how to use our platform to securely pass traffic from user devices to the internet, connect to your internal private applications via the Zscaler Client Connector, enable policies to protect users traffic, and monitor performance for all users, private applications, and more.
