Zscaler and Onelogin Solution Brief

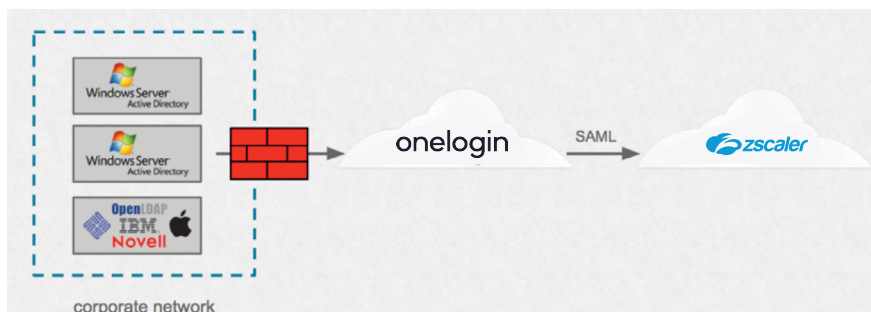

More and more users are embracing the use of cloud-based applications. In fact, there has been an exponential rise in the number and usage of cloud-based applications in the Enterprise.

SOLUTION OVERVIEW

Zscaler and OneLogin have partnered to deliver seamless authentication and security for enterprises using cloud-based applications. By combining Zscaler's Security Cloud with OneLogin's identity and access management service, enterprises can apply corporate policy to every employee, regardless of where they are or what device they are using. The OneLogin solution for Zscaler enables firms to easily connect multiple internal directories to Zscaler, enjoy single sign-on at the office or on the go, and enforce multi-factor authentication.

- Many companies use Federated Identity systems like SAML to authenticate users only once with an identity provider and then access multiple cloud services without additional authentication.
- Zscaler supports SAML and fully integrates with these Federated Identity Systems.

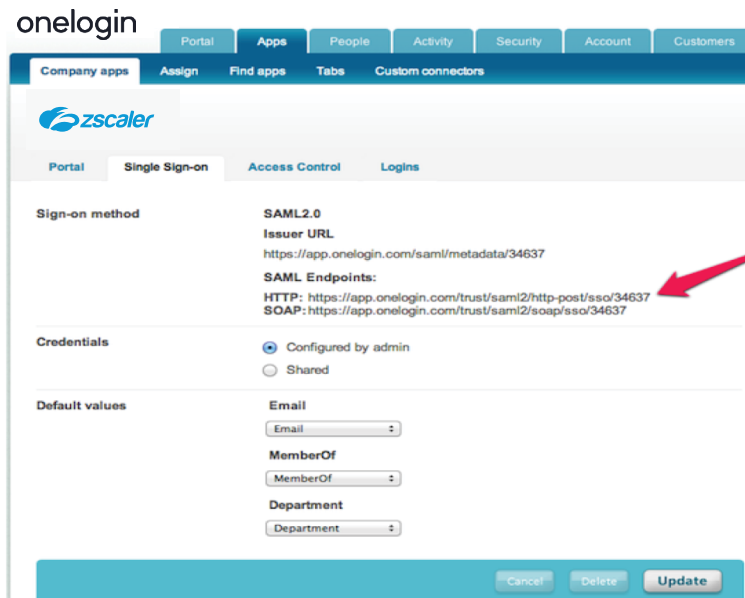

The end result is users can log into Zscaler with their AD credentials and the AD Group membership is automatically synchronized to Zscaler.

HIGHLIGHTS

- Instant-on provisioning of user-based security and authentication to safely enable cloud applications
- Seamless integration with Federated Identity solution using SAML
- Users login to Zscaler with their AD credentials. Get Multi-factor authentication through a pre-integrated 3rd party solution

Together, Zscaler and OneLogin provide a seamless, secure and highly usable integrated solution for Enterprises to safely enable cloud applications and the use of mobile devices.

About Zscaler

Zscaler is revolutionizing Internet security with the industry’s first security-as-a-service platform, used by more than 5,000 leading organizations, including 50 of the Fortune 500. Zscaler is a Gartner Magic Quadrant leader for Secure Web Gateways and delivers a safe and productive Internet experience for every user, from any device, and from any location – 100% in the cloud. Zscaler delivers unified, carrier-grade Internet security, next-generation firewall, web security, sandboxing/advanced persistent threat (APT) protection, data loss prevention, SSL inspection, traffic shaping, policy management, and threat intelligence – all without the need for on-premises hardware, appliances, or software.
